

## USB DI box for live engineers

The Austrian start-up company sonible presents ml:1, a usb di box optimized for live and event applications.

Combining an audio interface, a signal generator and a stereo DI box in one appliance, the ml:1 addresses a wide range of typical challenges facing event technicians.

Using the USB Audio Class standard, the ml:1 equips computers and tablets with professional audio interfaces (analog XLR, AES/EBU XLR) without the need to install additional drivers.

The lockable Neutrik® USB connector guarantees a mechanically reliable connection even in live situations and solves typical problems with error-prone 3.5mm jack adapters when connecting laptop computers.

In USB mode, power is supplied via the USB port, facilitating a quick and clean stage setup. The plain and robust design blends in even with optically challenging stage sets.

The internal signal generator works independently of phantom power or other external power sources. This unique feature allows a simple line check even before the actual signal source is connected.

In addition, the ml:1 can also be used as a regular passive stereo DI box via its two 6.3mm jacks.

Since september 2013, the ml:1 can be purchased directly from the manufacturer's website for € 349. For more detailed information, visit [www.sonible.com](http://www.sonible.com).
