# welcome to entropy:EQ<sup>+</sup>

**The new dimension of EQing simplifies the postproduction of the harmonic and inharmonic sound components of audio recordings – seamlessly and extremely fast.**

The entropy:EQ<sup>+</sup> is a plug-in that allows for both harmonic and inharmonic sound portions to be adjusted over the entire frequency range. Take this well-known feeling, for example: you've already run out of patience, but the snare triggers are still too muffled, while the guitar plucking sounds are way too dominant.

Situations like this have encouraged us to seek new ways of EQing and thus put an end to spending countless hours of studio time on postproduction. The entropy:EQ<sup>+</sup> simplifies the editing process for the impact noise of drums, guitars and other plucking instruments, and introduces you to a whole new world of postproduction creativity. Within seconds, this plug-in will also straighten out your mix in many different fields of applications.

# install

## system requirements

<b>CPU</b>	Intel Core Duo i5
<b>RAM</b>	2GB
<b>Operating systems</b>	Windows 7 (32/64 bit) Windows 8 (32/64 bit)
	Mac OSX 10.7 and newer

You will need admin rights to successfully install the plug-in.

Please note that entropy:EQ+ requires the iLok License Manager. You can download it for free from [www.ilok.com](http://www.ilok.com)

## Windows

To start the installation process, extract the downloaded zip-file **sonible\_entropyeq\_win.zip** on your hard disk.

To install entropy:EQ+ on your system, please run the installation file **entropyeq\_installer.exe**.

The installer will now guide you through the necessary steps to install entropy:EQ+ as a 32 and/or 64 bit plug-in on your computer.

During installation, you can select which version(s) of entropy:EQ+ should be installed. You can also select custom installation folders for your VST2 plug-ins or simply use the default folders provided by the installer.

The VST3 and AAX version of the plug-in will automatically be installed to the default folders for the respective format.

**VST3** (on a 64 bit operating system):

```
..\Program Files\Common Files\VST3\  
..\Program Files(x86)\Common Files\VST3\
```

**AAX** (on a 64 bit operating system)

```
..\Program Files\Common Files\Avid\Audio\Plug-Ins  
..\Program Files(x86)\Common Files\Avid\Audio\Plug-Ins
```

After the installation has been completed, entropy:EQ+ will be available as a new plug-in in your favorite DAW.

## Mac OSX

To start the installation process, please open the downloaded disk image **sonible\_entropyeq\_mac.dmg**.

This will mount the image and open a finder window showing the content of the installation package.

To install entropy:EQ+ on your system, please run the installation file **entropyeq\_installer.mpkg**.

The installer will now guide you through the necessary steps to install entropy:EQ+ on your computer.

entropy:EQ+ will automatically be installed at the default locations for audio plug-ins:

### Audio Unit

```
/Library/Audio/Plug-Ins/Components/  
entropyeq.component
```

### VST

```
/Library/Audio/Plug-Ins/VST/entropyeq.vst
```

If you need to change the location of the plug-in, please drag the corresponding file(s) manually to the designated folder **after** the installation has finished.

When opening your favorite DAW, entropy:EQ+ should now be listed as a new plug-in.

# authorization

## Licensing system

The licensing system of sonible is based on a computer-bound license model. This means that each license key allows you to install entropy:EQ+ on two computers with unique system IDs. These system IDs are computed during license activation.

The same license can be used by multiple users, but each user has to individually unlock the full version of entropy:EQ+ under her/his account.

If a system-ID changes (e.g. replacement of the hard disk), please contact us and ask for instructions to re-activate the license.

[support@sonible.com](mailto:support@sonible.com)

## unlocking

When opening entropy:EQ+ for the first time, a notification window will be displayed asking you to unlock entropy:EQ+ with a valid license key.

- Please make sure that your computer is connected to the internet before starting the registration process.
- Enter your license key and click „register“. The plug-in will now communicate with our server to check if the license is valid. If it is - enjoy! :)

If you purchased a license for entropy:EQ+ online, you receive your license key via email.

## trial version

To run entropy:EQ+ in demo-mode, simply click "try" and you can use entropy:EQ+ for a couple of days without any limitations.

After a certain number of days (see website), the demo-mode will expire and you need to purchase a license to continue to use the plug-in.

# updates

stay up to date

If a new release of the plug-in is available you'll get a notification at the bottom right of the plug-in window. By clicking on the red label you'll be forwarded to a website where you can download the latest version of entropy:EQ+.

To install the latest version of entropy:EQ+, simply follow the installation instructions given in this manual. A reactivation of the plug-in is not necessary.

update notice  
click to update

# user interface

an overview

**menu bar**  
In this section you can find all control buttons helping you to improve your workflow.

**interactive equalizer**  
Use this section to interactively control the filter curves. All parameters (center frequency, quality and gain) can be adjusted freely.

**parameter section**  
The parameter section offers a complete overview of all filter settings.

**master section**  
This section provides some plug-in information and global control parameters

# user interface

menu bar

## undo & redo

With these arrows you can perform an undo or redo action. In this step, the latest parameter changes will be undone or redone.

## A/B

By clicking on the A/B-button, you can switch between two different states of the plug-in. In each state, all parameter changes are saved. If you save the current state (preset handling), only the active state (A or B) will be saved.

## copy

The "copy"-button will copy the parameter settings of the active state to the other one.

## preset handling

To save a preset (all parameter values), just click the floppy disk icon. The dialog will ask you to choose a filename and press "save".

Loading a saved preset is done by choosing an option of the dropdown. The dropdown is refreshed each time you use it.

If you want to delete a preset or change its name, go to the preset folder with your local file explorer. In this way, you can easily share your presets among different workstations.

All presets are saved with the file extension ".spr" to the following paths:

OSX: `~/Library/Audio/Presets/sonible/entropyEQ`  
Windows: `My Documents\sonible\entropyEQ`

## blind:flug

A nice little feature of entropy:EQ+ is its "blind:flug" mode. This mode replaces the interactive equalizer display with an "old school" view, where all parameters have to be adjusted using rotary encoders. The lack of visual feedback may sometimes help to focus on your ears...

## bypass

This button can be used to bypass all processing of entropy:EQ+.

This internal bypass may be helpful when the bypass function offered by your host leads to glitches or sync-problems with other tracks.

# user interface

## parameter section

The parameter section shows eight filter bands and their related parameters.

When hovering over the parameter section of a band, the band is highlighted with the color of the related filter curve inside the interactive EQ display.

### precision mode

Using the small dropdown on the top left, you are able to change the gain zooming factor (y-axis) of your interactive equalizer window between 24, 12 or 6 dB.

### clear solo

This button deletes all active solos of all bands.

### flat

The „flat“-button resets all filter gains to 0 dB. All other filter parameters are retained.

### reset

The „reset“-button resets all parameters of the plugin to their default values.

**filter selection**

With a click on the filter symbol (cut, shelving, peq, entropy) the filter type of each band can be selected.

With another click on the selected filter symbol, the filter band can be enabled or disabled. A click on the entropy filter will transform the current band to an entropy band (see next page).

**changing values**

All filter parameters can be changed by dragging the respective value up and down with your mouse. In addition, a double click will allow you to edit the value with your keyboard.

These values can also be changed using the thumb control in the interactive equalizer section (see chapter "entropy:EQ - interactive equalizer section").

**solo mode**

To quickly analyze certain frequency ranges, each filter band can be „soloed“ by clicking on the small „s“-button next to the filter types.

**small effect meter**

The small effect meters for each band indicate how much signal energy is affected by the applied filter curve.

**filter types**

-  low cut
-  high cut
-  low shelf
-  high shelf
-  bell
-  entropy

# entropy filter

Bands 3, 4 and 5 of the entropy:EQ+ can be used as so-called “entropy filters”. Based on different analysis methods, an entropy filter is able to separate a signal into inharmonic and harmonic signal components.

You can interact with an entropy band as with any “normal” filter (gain, quality and center frequency), but the bell function shown in the gui acts as a weighting function and not as a classical EQ curve.

## using an entropy filter

1. Click the entropy symbol to transform the selected filter band into an entropy band. Please note that the gain label will immediately change from “dB” to “%”.
2. Once the gain of an active entropy band is changed, a second sum curve (white) will appear inside the interactive equalizer display.
3. If you now modify the gain of the band, the filter will not change the spectral balance of the track, but adapt the relation of inharmonic and harmonic components within the selected frequency region.

- positive gain values boost inharmonic components of the track (0% < gain < 100%)

- negative gain values increase the harmonicity of the recording (-100% < gain < 0%)

While the red sum curve shows the sum of all “normal” EQ bands, the white curve shows the mixing relation of inharmonic and harmonic signal components across the whole spectrum.

# user interface

## interactive equalizer section

### output meter

These meters show the output gain level.

The interactive equalizer display of entropy:EQ+ allows for a very intuitive and quick control of all parameters of a filter band.

You can simply drag and drop the thumbs related to each filter and immediately see (and hear) the resulting curve.

There are also three complementary key combinations for enhanced parameter control:

- alt+click+drag → change quality of the filter
- shift+click+drag → lock the center frequency, only change gain
- double-click → reset filter band

In addition, it is also possible to change the quality of a filter using the scroll wheel of your mouse hovering over an active thumb.

### precision mode

To zoom the y-axis (gain values), select the appropriate range in the dropdown on the top left.

# user interface

## master section

This section provides some entropy specific parameters, the master gain slider and some plug-in information.

**entropy** The entropy parameter allows you to globally adjust the relation of inharmonic (>0%) and harmonic signal components (<0%).

**strength** The strength parameter controls the separation strength between inharmonic and harmonic parts of the audio signal:

- Lower values (<50%) lead to a wider transition range between different signal parts and may sound more natural.

- Higher values (>50%) result in a harder separation and can be used to get more distinct results.

**smoothing** Apply a smoothing to the entropy signal:

- Low values (<50%) may be used to reduce the amount of smoothing during computation.

- High values (>50%) increase the amount of smoothing during computation and may lead to a more natural sound but less distinct results.

**master** master gain of the plug-in between -20 dB and +20 dB

**resizing** In the bottom right corner, you see a triangle that enables you to resize the plug-in. The next time you open the plug-in, the size will be restored.
