enabling sonic visions

We are sonible, a young tech company based in Graz (Austria) developing soft and hardware tools for audio production. Our multidisciplinary team is now searching for support in the field of software engineering and programming for creating the future of music software at sonible.

C++ UI/Frontend Engineer
20-38.5h/week

Your Role

- You conceptualize, develop and deliver new audio products in C/C++ for Mac and Windows.
- You transform graphic UI concepts into highly interactive and modern user interfaces using C/C++ frameworks
- You contribute to extend and improve the existing application and UI code base.
- You work closely with a cross-functional agile team consisting of product management, UX design, research and QA to realize product requirements.

Your Profile

- You have advanced programming skills in modern C++ and you are experienced with scripting languages like Python. Experience using audio plugin SDKs or the JUCE framework is beneficial.
- You already created graphical user interfaces using frameworks like JUCE or Qt.
- You are familiar with OpenGL. Metal know-how is beneficial.
- You are experienced in working with other programmers under a source code control system such as Git and you ideally already worked with tools like CMake or Catch2.
- You have a Master's degree or equivalent in Computer Science or a related field. Working knowledge or exposure to DSP and audio signal processing algorithms is a plus.
- It would be a nice benefit, if you are familiar with existing audio production technologies and enjoy working creatively with music.

Our Offer

- We offer a flexible schedule and the possibility for remote work.
- We are a small yet powerful team and appreciate a good, amicable working climate.
- We enjoy work & life – we even have a beer tap in our office for the occasional after work come together.
- Become part of a young, growing company in the international music industry and help us shape the future of audio production!

Start

As soon as possible
