

puffer:fish

Puff it up.
Push your sound.

Welcome to puffer:fish	3
Install	4
Authorization	5
User Interface	6
Saturation Characters	7
Settings	10

puffer:fish is a free saturation plug-in that brings playfulness back into the mixing workflow, because not every creative moment needs reason and severity. Sometimes creative minds just want to push things and see what happens. Despite its lighthearted approach, puffer:fish delivers the same high sound standards sonible is known for.

Nothing fishy going on. Just great sounding saturation you can play with all day.

System requirements

CPU

Intel Core i5
AppleM1
RAM
4GB

Operating systems

Windows 10+ (64 bit)
Mac OS 10.14+

OpenGL Version 3.2+

You will need admin privileges to successfully install the puffer:fish plug-in.

Mac OSX

To start the installation process, please open the disk image [sonible_pufferfish_osx_x.x.x.dmg](#). This will mount the image and open a finder window showing the content of the installation package.

To install puffer:fish on your system, run the installation file [pufferfish.pkg](#).

The installer will now guide you through the necessary steps to install puffer:fish on your computer. puffer:fish will automatically be installed in the default locations for audio plug-ins.

Default folders:

Audio Unit

/Library/Audio/Plug-Ins/Components/

VST

/Library/Audio/Plug-Ins/VST/

VST3

/Library/Audio/Plug-Ins/VST3/

AAX

/Library/Application Support/Avid/Audio/Plug-Ins/

Windows

To start the installation process, extract the downloaded zip-file [sonible_pufferfish_win_x.x.x.zip](#) onto your hard disk and run the installer.

The installer will now guide you through the necessary steps to install puffer:fish on your computer. puffer:fish will automatically be installed in the default locations for audio plug-ins.

Default folders:

VST3

C:\Program Files\Common Files\VST3\

VST

C:\Program Files\Common Files\VST\

AAX

C:\Program Files\Common Files\Avid\Audio\Plug-Ins

Licensing system

puffer:fish comes with a machine-based license.

By creating a user account on www.sonible.com and registering your products – if they are not already visible in your Dashboard, you can manage your plug-in activations.

Machine-based

Each license key allows you to install puffer:fish on two computers with unique system IDs. These system IDs are computed during license activation.

The same license can be used by multiple users, but each user has to individually unlock the full version of puffer:fish under their account.

In case a system-ID is changed (e.g. replacement of the hard drive), you can revoke/activate the plug-in next to the respective system-ID in the Dashboard of your sonible user account.

Unlocking

If you got a license for puffer:fish in our online shop, you will receive your license key via email.

Machine-based unlocking

When opening puffer:fish for the first time, a notification window will be displayed asking you to unlock puffer:fish with a valid license key.

Please make sure that your computer is connected to the internet before starting the registration process.

Enter your license key and click „register.“ The plug-in will now communicate with our server to check if the license is valid. If it is – enjoy! :)

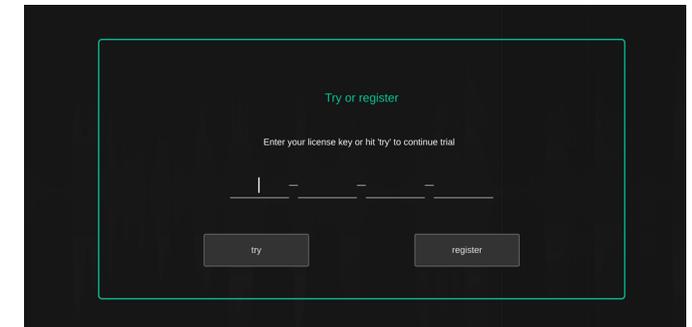

If you don't receive the email within minutes please check your junk folder first before contacting our support (support@sonible.com).

Trial version

To run puffer:fish in demo-mode, simply click "try" and you will then be able to use puffer:fish for a couple of days. When the demo period expires, you will need to head to our shop and get the full license for free in order to continue using the plug-in.

Internet connection requirements

sonible plug-ins only needs an internet connection during the trial period and for initial license activation. During the trial period, the plug-in needs to go online every time it is used. Once the license of your plug-in has successfully been activated, an internet connection is no longer needed.

Settings

Find general settings and your license info here.

Character

Pick your fish personality. From smooth and friendly to buzzing chaos or full-on spiky rebellion.

Puffiness

Feed the fish. More puffiness means more harmonics, more density, more attitude.

Bybass

Let the fish hold its breath. Instantly compare dry and puffed-up sound.

Tinyfin

Tinyfin is all about gentle saturation that adds warmth, depth, and sonic richness. On a technical level, it introduces soft harmonics that thicken the signal and enhance perceived loudness, all while staying musical and controlled.

Creatively, it is the character you reach for when you want your sound to feel more alive, more confident, and more finished.

Tinyfin works beautifully on vocals, pads, guitars, keys, and buses where cohesion matters more than aggression. It supports. And somehow, everything feels better.

Grittiness

Fishiness

Smoothness

The screenshot shows the 'puffer:fish' software interface. At the top left is the logo, and at the top right is a gear icon. The main area features a large, glowing blue, pufferfish-like character with a smiling mouth and small fins. Below the character, the number '92' is displayed in a large font, with 'Puffiness' written underneath it. To the right of the number, the word 'Tinyfin' is written in a large font, with 'Character' written underneath it. At the bottom left, the 'sonible' logo is visible, and at the bottom right, there is a 'bypass' button.

Spikeskin

Spikeskin does not believe in subtlety. It brings bold, edgy energy to your sound. Designed for moments when clean feels a little too polite, Spikeskin pushes saturation into gritty, expressive distortion.

Harmonics stack fast, transients get sharper, and the sound becomes raw, gritty, and aggressive. Spikeskin is about attitude. About forcing sound to the brink and loving the tension.

Perfect for drums that need to hit harder, basses that need to snarl, synths that need to scream, or any sound that should feel dangerous.

Puffiness Character

son|ble bypass

Twitchgill

Twitchgill starts warm, but the harder you push it, the more unpredictable things become. This is where saturation turns into character and personality starts to show.

Twitchgill adds harmonics that react dynamically to the input signal, creating movement, grit, and edge. At lower settings it can add life and presence. Push it further and the sound begins to twist, buzz, and bite back.

Drums, basses, synths, loops, and sound design all come alive when Twitchgill is in charge. It invites you to keep turning the knob just a little more.
